OUR CASE STUDIES

Client Business Issue

Marangoni only had a system to manage their finance processes, and all their remaining processes were tracked manually. They had difficulty in identifying the bottlenecks on their manufacturing operations, as the required operational information had to manually process through a time consuming activity. Hence they did not communicate the relevant information across all departments as the reporting was manual. Overall operational efficiency had room for improvements.

Client Business Need

Marangoni required an Enterprise Resource Planning (ERP) System with the operational coverage facility across all their departments, from Supply chain management, Sales & Exports, Finance & Fixed asset management & Manufacturing. Specifically in manufacturing to capture data from machines as much as possible & reduce human intervention

CASE STUDY

MARANGONI

The Commercial Vehicle Tyre Re-treading Business Group In Sri Lanka

What Sandbox did

Sandbox provided a Tier 1 Enterprise Recourse Planning (ERP) System with a following modules as Finance, Fixed Asset Management, Procurement, Inventory Management, Sales & Exports, Manufacturing and Human Capital Management (HCM), along with a module wise customizable reporting tool facility. Solution included another application for Hardware automation as Production Output Monitoring System (POMS) was implemented with touch screen data entry interfaces on the manufacturing floor and also in instances where automatically data was captured through production machines through PLC controllers units

Through analysis was conducted on the production machines, on their controllers, PLC configurations, network connectivity & what methods of output dashboards (Industrial LED Panels) were feasible to make the operation efficient & also to make sure the proper hardware was implemented to withstand the overheated environment. Also functionally of all departmental operational procedures, operation difficulties and their reporting requirements were identified & processes were re-engineered during the implementation to achieve the best possible outcome Based on the requirement study, the hardware & software solution was designed & presented to the management. Based on the feedback final embedded solution was agreed with Marangoni.

VALUE TO CLIENT

- Total visibility
- Automated Production process
- Improved Production Planning process
- Enhance the business processes and better decision making
- Improved Inventory management process
- Facilitated Regulatory Compliances and Improved Reporting
- Proper Payable/Receivable invoicing with, accurate credit terms, makes it hassle free to collect from debtors and higher control in credits and dues.
- Minimize the human data entry and errors
- Actual timing of activities are captured from machines rather than human entry.
- Real-time operation related data most displayed on dashboard to have the maximum visibility to the Management
